REGISTER YOUR PRODUCT

The benefits of registering include:

1. Safeguarding your investment.
2. Ensuring long-term maintenance and servicing of your product.
3. Receiving updates with product information, maintenance tips and industry news.

Register ONLINE at warranty.invacare.com

Please have your model number and purchase date available to complete your registration.

Any registration information you submit will only be used by Invacare Corporation and protected as required by applicable laws and regulations.
SPECIAL NOTES

Signal words are used in this manual and apply to hazards or unsafe practices which could result in personal injury or property damage. Refer to the table below for definitions of the signal words.

<table>
<thead>
<tr>
<th>SIGNAL WORD</th>
<th>MEANING</th>
</tr>
</thead>
<tbody>
<tr>
<td>DANGER</td>
<td>Danger indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.</td>
</tr>
<tr>
<td>WARNING</td>
<td>Warning indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Caution indicates a potentially hazardous situation which, if not avoided, may result in property damage.</td>
</tr>
</tbody>
</table>

NOTICE

THE INFORMATION CONTAINED IN THIS DOCUMENT IS SUBJECT TO CHANGE WITHOUT NOTICE.

Check ALL parts for shipping damage. If shipping damage is noted, DO NOT use. Contact dealer/carrier for further instruction.

MAINTENANCE

Maintenance MUST be performed ONLY by qualified personnel.
OPERATION OF THE PATIENT LIFT

The mast (C) includes the steering handles used to move and guide the lift. The mast is supported in a socket in the rear center of the base with casters (A). For transporting the lift in a vehicle, the mast, boom and pump assembly may be lifted from the base socket for convenient storage. Each time the mast is returned to the socket of the base, care should be used to push the mast as far as possible down into the socket. Rotate the mast slightly until it locks in the center position. The bottom of the mast tube is grooved on either side, and those grooves seat on tabs in the base socket to prevent any rotation of the mast during the lift procedures. Secure the mast to the base by securely tightening the screw located at the rear of the base.

Refer to the Patient Sling owner’s manual for complete lifting preparation information.

The horn (D) is made with knobs on both sides and in the center to accept the sling that supports the patient during lift.

There are two controls on the pump assembly (F), which are the pump handle (G) and the control valve (H). With the control valve closed, the pump handle is moved up and down with slow strokes of even pressure to raise the horn. A patient in a sling attached to the horn would be elevated by this operation. The horn is lowered by opening the control valve and moving the control valve away from the pump handle. A safety gate is part of the hydraulic system that prevents sudden lowering of the horn regardless of how far the control valve is opened.

The knee pad (E) can be adjusted for patient support and comfort. Pull both adjustment pins outward at the same time to move the knee pad to the desired position. Make sure adjustment pins are engaged.

To raise the footplate (I), position the knee pad (E) in the highest setting. When the footplate is up, the knee pad can be adjusted to the desired position.

WARNING: For maximum stability and patient safety, operate this lift with the base legs in maximum open position and locked when lifting a patient.

The shifter handle (B) is used to open the legs of the base for stability before lifting a patient. The base legs should be locked in the maximum open position at all times when a patient is on the lift.

To open the base legs, grasp the shifter handle in one hand, and place the opposite hand on the steering handle of the mast for balance. Move the handle to your right to release the lock pin then bring the handle towards you in a complete half-circle. The lock pin should insert into a hole in the plate to lock the legs in full open position and the shifter handle should once again be vertical. To close the legs to a narrow position for storage, reverse the above procedure. If the shifter handle is not vertical (straight up and down), the lock pin is not seated in place.

Rev. A 1148135

WARNING - ALWAYS be aware of the lift arms. Injury to the patient and/or assistant may occur.

WARNING - ALWAYS be aware of the footrest, especially the patient’s position on the footrest. Injury to the patient and/or assistant may occur.

SECTION 1—GENERAL GUIDELINES

WARNING

SECTION 1 - GENERAL GUIDELINES contains important information for the safe operation and use of this product.

DO NOT move a person suspended in a sling any distance. The Invacare lift is NOT a transport device. It is intended to transfer an individual from one resting surface to another (such as a bed to a wheelchair). Otherwise, injury or damage may occur.

Assembling the Lift

Check all parts for shipping damage before using. In case of damage, DO NOT use the equipment. Contact the dealer for further instructions.

DO NOT overtighten the mounting hardware. This will damage the mounting brackets.

Using the Sling

WARNING

Standing Slings - Individuals that use the standing sling MUST be able to support the majority of their own weight, otherwise injury can occur. Before lifting the patient, make sure the bottom edge of the standing sling is positioned on the lower back of the patient and the patient's arms are outside the standing sling. The belt MUST be snug, but comfortable on the patient, otherwise the patient can slide out of the sling during transfer, possibly causing injury.

Transport Slings - Before lifting the patient, make sure the bottom edge of the transport sling is at the base of the spine and the patient's arms are outside the transport sling. DO NOT raise the patient to a full standing position while using the transport sling, otherwise injury may occur.

DO NOT use any kind of material (such as a plastic back incontinence pad or seating cushion) between the patient and sling material that may cause the patient to slide out of the sling during transferring.

ALWAYS use the color coded strap on the standing sling closest to the patient while still maintaining patient stability and comfort. The shortest of the straps must be at the back of patient for support. Using the long section will leave little or no support for the patient's back. The loops of the sling are color coded and can be used to place the patient in various positions. The colors make it easy to connect both sides of the sling equally. Make sure that there is sufficient head support when lifting a patient.
Use an Invacare sling that is recommended by the individual’s doctor, nurse or medical assistant for the comfort and safety of the individual being lifted.

After each laundering (in accordance with instructions on the sling), inspect sling(s) for wear, tears, and loose stitching.

Bleached, torn, cut, frayed, or broken slings are unsafe and could result in injury. Discard immediately.

DO NOT alter slings.

Be sure to check the sling attachments each time the sling is removed and replaced, to ensure that it is properly attached before the patient is removed from a stationary object (bed, chair or commode).

**Performing Maintenance**

Refer to [Maintenance](#) on page 27 for a maintenance schedule and procedures.

Regular maintenance of lifts and accessories is necessary to ensure proper operation.

After the first year of use, the attachment points and the mounting bracket of the lift arm should be inspected every three months to determine the extent of wear. If these parts become worn, replacement must be made.

DO NOT overtighten mounting hardware. This will damage mounting brackets.

Casters and axle bolts require inspections every six months to check for tightness, wear, debris (such as hair and dirt) and that they roll free.

After the first twelve months of operation, inspect all pivot points and fasteners for wear. If the metal is worn, the parts MUST be replaced. Make this inspection every six months thereafter.

Top bolt must be checked at least every six months in conjunction with periodic maintenance.
SECTION 2—INSTALLATION

Assembling the Base, Mast and Horn Assembly

WARNING
The mast may be removed from the base for storage or transporting. Each time the mast is removed and returned to the socket of the base, the mast MUST be locked into the socket of the base assembly.

NOTE: For this procedure, refer to FIGURE 2.1 and FIGURE 2.2 on page 12.

1. Unpack the components from the shipping cartons.
2. Remove the locking screw from the bottom of the base.
3. Match the notch at the bottom of the mast assembly with the tabs inside the socket of the base assembly.
4. Insert the mast assembly into the socket and onto the tabs.
5. Attempt to turn the mast assembly.

NOTE: If the mast does not turn, the mast is centered and locked in place.

6. Insert the locking screw into the bottom of the base and tighten securely.

7. Remove the shoulder bolt, steel washers, nylon washers, and locknut from the horn mounting lugs at the top of the mast assembly.

8. Align the holes of the horn mounting lugs and the horn bushing.

9. Insert the shoulder bolt completely through the holes of the horn mounting lugs, horn bushing, nylon washers and steel washers. Refer to FIGURE 2.2 on page 12.
NOTE: Be sure that the shoulder bolt is completely through the holes of the mast assembly and horn assembly, and they are not riding on the shoulder of the bolt. The nylon washers must sit between the horn bushing and horn mounting lugs.

CAUTION
When assembled, the horn and mast assemblies MUST pivot easily.

10. Tighten the shoulder bolt and locknut. The locknut and shoulder bolt can be tightened completely.

NOTE: The horn assembly will pivot easily if the mounting hardware is aligned properly when the horn assembly is secured to the mast. To check for correct alignment of the hardware, use the Allen wrench provided and turn the shoulder bolt by hand (it should rotate without a lot of force being applied). If excessive force is necessary, the shoulder bolt is NOT aligned properly. Disassemble and repeat assembly procedures until proper alignment is obtained.

11. To check for tightness of the locknut and shoulder bolt:
   A. Raise the horn assembly.
   B. Push the control handle away from the pump assembly.
   C. If the horn assembly pivots easily, the locknut and shoulder bolt are not too tight.
   D. If the horn assembly does not pivot easily or does not pivot at all, the locknut and bolt are not aligned properly. Repeats steps 7 to 11.

12. Remove the shoulder bolt and locknut from the cylinder lugs on the horn assembly.
13. Align the holes of the cylinder lugs and the cylinder rod.
14. Insert the shoulder bolt completely through the holes.
15. Tighten the locknut and shoulder bolt.
Base Shifter Handle Assembly

NOTE: For this procedure, refer to FIGURE 2.3.

1. Insert the base shifter handle into the cam lock assembly at the back of the base.
2. Align the holes of the shifter handle and cam lock assembly.
3. Tighten the thumbscrew to secure the shifter handle in place.

NOTE: This should prevent the base shifter handle from being removed.
SECTION 3—OPERATING THE LIFT

Introduction

⚠️ WARNING

DO NOT attempt any transfer of a patient without approval of the patient's physician, nurse, or medical assistant. Thoroughly read the instructions in this owner's manual, observe a trained team of experts performing the lifting procedures and then perform the entire lift procedure several times with proper supervision and a capable individual acting as a patient.

ONLY operate the lift with the legs of the lift in the maximum open position for optimum stability and safety. If the patient is in a sling and it becomes necessary to move through a narrow passage, close the legs of the stand up lift only as long as it takes to move through the passage. When the stand up lift is through the passage, return the legs to the maximum open position.

If it is necessary to close the legs to maneuver the stand up lift under a bed, close the legs only as long as it takes to position the stand up lift over the patient and lift the patient off the surface of the bed. When the legs of the stand up lift are no longer under the bed, return the legs to the maximum open position.

Use common sense in all lifts.

Invacare slings and lift accessories are specifically designed to be used in conjunction with Invacare lifts. Slings and accessories designed by other manufacturers are not to be utilized as a component of Invacare’s lift system.

DO NOT exceed maximum weight limitation of the lift. The weight limitation for the Get-U-Up Lift is 350 lbs.

ALWAYS keep hands, fingers, feet and toes clear of moving parts to avoid injury.

Invacare recommends that two assistants be used for all lifting preparation and transferring to/from procedures; however, the stand up lift can be operated with one assistant. The use of one assistant is based on the evaluation of the health care professional for each individual case.
Operating the Lift

Opening/Closing the Legs of the Adjustable Base

NOTE: For this procedure, refer to FIGURE 3.1 on page 15.

The shifter handle is used to open/close the legs of the base for stability when lifting a patient.

Opening

1. Stand at the rear of the lift and grasp the shifter handle in one-hand and place the opposite hand on the steering handle of the mast for balance. Refer to Details “A” and “B”.

2. Push the shifter handle to your right to release the lock pin from its mounting hole.

3. Turn the handle clockwise until you are able to secure the lock pin into the opposite mounting hole to fully open the legs of the base. Refer to Detail “C”.

NOTE: The lock pin MUST insert into its mounting hole in the socket assembly to lock the legs in the full open position. The shifter handle will be in the vertical position and parallel with the mast assembly.

⚠️ WARNING

If the shifter handle is NOT vertical, the lock pin is NOT seated in the socket assembly. DO NOT use the lift until the lock pin is properly seated and locked in place or injury and/or damage may occur.

Closing

1. Stand at the rear of the lift and grasp the shifter handle in one-hand.

2. Place the opposite hand on the steering handle of the mast for balance. Refer to Details “A” and “B”.

3. Push the shifter handle to your right to release the lock pin from its mounting hole.

4. Turn the handle counter-clockwise until you are able to secure the lock pin into the opposite mounting hole to close the legs of the base. Refer to Detail “C”.
Raising/Lowering Model Hydraulic Lifts

NOTE: For this procedure, refer to FIGURE 3.2 on page 16.

Raising the Lift

1. Ensure the control valve is in the closed position (control valve positioned towards pump handle).
2. Move the pump handle up and down to raise the lift.

Lowering the Lift

1. Ensure the control valve is in the open position (control valve positioned away from pump handle).
2. Move the pump handle up and down to lower the lift.

NOTE: The rate of descent is controlled by varying the amount that the control valve is opened.

NOTE: A safety gate is part of the hydraulic system that maintains a SLOW constant descent of the boom regardless of how far the control valve is opened.
Adjusting the Knee Pad Height

⚠️ WARNING

Never adjust knee pad while patient is in the standing position.
Never try to adjust knee pad while the lift is moving.
Always make sure that the adjustment pins are engaged in the corresponding height adjustment holes before using.

NOTE: For this procedure, refer to FIGURE 3.3.

1. Pick a height setting that will be comfortable to the patient and provide the necessary support.

   NOTE: The knee pad should be positioned so that the knee portion of the leg contacts the pad.

   NOTE: The upper adjustment pins are typically used for shorter individuals. The lower adjustment pins are typically used for taller individuals.

2. Using both hands, pull both adjustment pins outward at the same time and hold.

3. Position the knee pad to the desired height and release adjustment pins into the corresponding alignment holes.

4. Check to make sure that both pins are engaged.

Note: The upper adjustment pins are typically used for shorter individuals. The lower adjustment pins are typically used for taller individuals.
SECTION 4—LIFTING THE PATIENT

Introduction

⚠️ WARNING
The legs of the stand up lift MUST be in the maximum open position before lifting the patient for optimum stability and safety. If it is necessary to close the legs to maneuver the stand up lift under a bed, close the legs only as long as it takes to position the stand up lift over the patient and lift the patient off the surface of the bed. When the legs of the stand up lift are no longer under the bed, return the legs to the maximum open position.

Invacare recommends that two assistants be used for all lifting preparation and transferring to/from procedures; however, our equipment will permit proper operation by one assistant. The use of one assistant is based on the evaluation of the health care professional for each individual case.

Refer to the patient sling owner’s manual for complete lifting preparation information.

Refer to General Guidelines on page 8 in this manual before proceeding further and observe all warnings indicated.

Lifting the Patient

⚠️ WARNING
DO NOT move the patient if the sling is not properly connected to the attachment points of the stand up lift. Check that the sling is properly connected to the attachment points prior to lifting a patient. If any attachments are not properly in place, correct the problem. When the sling is elevated a few inches off the stationary surface and before moving the patient, check again to make sure that all sling attachments are secure. If any attachments are not properly in place, lower the patient back onto the stationary surface and correct this problem - otherwise, injury or damage may occur.

Adjustments for safety and comfort should be made before moving the patient. Patient's arms should be outside of the straps.

DO NOT use slings and stand up lifts of different manufacturers. Invacare slings are made specifically for use with Invacare stand up lifts. Injury or damage may occur.

NOTE: For this procedure, refer to FIGURE 4.1 on page 19.

1. Instruct patient to hold onto the handgrips on both sides of the stand up lift. Refer to Detail “A”.

2. Instruct the patient to lean back into the standing or transport sling.
WARNING

Before positioning the legs of the stand up lift around the patient, make sure the patient’s feet are out of the way of the footplate, otherwise injury can occur.

**Standing Slings** - Before lifting the patient, make sure the bottom edge of the standing sling is positioned on the lower back of the patient and the patient’s arms are outside the standing sling.

**Transport Slings** - Before lifting the patient, make sure the bottom edge of the transport sling is at the base of the spine and the patient’s arms are outside the sling. DO NOT raise the patient to a full standing position.

3. Ensure the following:
   - Patient’s knees are secure against the knee pad.
   - Patient’s feet are positioned on the footplate.
   - The bottom edge of either the standing sling is positioned on the lower back or the transport sling is at the base of the patient’s spine.
   - The patient’s arms are outside of the standing or transport sling.
   - The legs are in the maximum open position.

WARNING

Before transferring, check that the wheelchair weight capacity can withstand the patient’s weight. Refer to Typical Product Parameters in the wheelchair owner’s manual.

If transferring from a wheelchair, the wheelchair wheel locks MUST be in the locked position before lowering the patient into the wheelchair. Otherwise, injury may occur.

4. If transferring from a wheelchair, lock the wheel locks on the wheelchair. Refer to Detail “B”.

5. Raise the patient above the surface (bed, wheelchair, or commode) high enough to clear the surface. The patient’s weight will be fully supported by the lift. Refer to Detail “C” on page 19 and Operating the Lift on page 14.

NOTE: The lower center of gravity provides stability making the patient feel more secure and the lift easier to move.

NOTE: The lift arms will stay in position until lowered.
**Moving the Patient**

⚠️ **WARNING**

DO NOT move a person suspended in a sling any distance. The Invacare lift is NOT a transport device. It is intended to transfer a seated individual from one resting surface to another (such as a bed to a wheelchair). Otherwise, injury or damage may occur.

The legs of the stand up lift MUST be in the maximum open position for optimum stability and safety. If the patient is in a sling and it becomes necessary to move through a narrow passage, close the legs of the stand up lift only as long as it takes to move through the passage. When the stand up lift is through the passage, return the legs to the maximum open position.

DO NOT roll caster base over objects such as carpet, raised carpet bindings, door frames, or any uneven surfaces or obstacles that would create an imbalance of the lift during transfer of a patient suspended in the lift sling. This could cause the lift to tip over. Use the mast handle at all times to push or pull the lift.

**NOTE:** For this procedure, refer to Detail “C” of FIGURE 4.1.

1. Ensure the legs of the stand up lift are in the maximum open position. If not, open legs to the maximum open position.
2. Move the stand up lift away from the surface using the steering handle.
3. Slowly move the patient to the desired surface.
SECTION 5—TRANSFERRING THE PATIENT

⚠️ WARNING

DO NOT attempt any transfer of a patient without approval of the patient's physician, nurse, or medical assistant.

DO NOT move the patient if the sling is not properly connected to the attachment points of the stand up lift. Check that the sling is properly connected to the attachment points prior to lifting a patient. If any attachments are not properly in place, correct the problem. When the sling is elevated a few inches off the stationary surface and before moving the patient, check again to make sure that all sling attachments are secure. If any attachments are not properly in place, lower the patient back onto the stationary surface and correct this problem - otherwise, injury or damage may occur.

Adjustments for safety and comfort should be made before moving the patient. The patient's arms should be outside the straps.

Before positioning the legs of the stand up lift around the patient, make sure the patient's feet are out of the way of the footplate, otherwise injury can occur.

DO NOT use slings and stand up lifts of different manufacturers. Invacare slings are made specifically for use with Invacare stand up lifts. Otherwise, injury or damage may occur.

The legs of the stand up lift MUST be in the maximum open position before lifting the patient for optimum stability and safety. If the patient is in a sling and it becomes necessary to move through a narrow passage, close the legs of the stand up lift only as long as it takes to move through the passage. When the stand up lift is through the passage, return the legs to the maximum open position. If it is necessary to close the legs to maneuver the stand up lift under a bed, close the legs only as long as it takes to position the stand up lift over the patient and lift the patient off the surface of the bed. When the legs of the stand up lift are no longer under the bed, return the legs to the maximum open position.

DO NOT roll caster base over objects such as carpet, raised carpet bindings, door frames, or any uneven surfaces or obstacles that would create an imbalance of the lift during transfer of a patient suspended in the lift sling. This could cause the lift to tip over. Use the mast handle at all times to push or pull the lift.

Be sure to check the sling attachments each time the sling is removed and replaced to ensure that it is properly attached before the patient is removed from a surface.

NOTE: Invacare recommends that two assistants be used for all lifting preparation and transferring to/from procedures; however, our equipment will permit proper operation by one assistant. The use of one assistant is based on the evaluation of the health care professional for each individual case.
Moving the Patient to a Commode

NOTE: For this procedure, refer to FIGURE 5.1.

1. Raise the patient high enough to clear the arms of the commode chair. Their weight will be supported by the lift. Refer to Detail “A”.

2. Guide the patient onto the commode chair.

3. Lower the patient onto the commode chair.

4. Perform one of the following (refer to Detail “B” or “C”):
   - Standing Sling - unhook the standing sling from the attachment points on the lift.
   - Transport Sling -
     i. Unhook the transport sling from the bottom attachment points on the lift.
     ii. Lift up on the patient’s legs and remove the thigh supports from underneath the patient.
     iii. If desired, unhook the transport sling from the top attachment points on the lift.

NOTE: The patient can remain in the upper portion of the transport sling while using the commode.

5. Instruct or assist the patient in lifting their feet off the footplate.

6. Remove the sling from around the patient.

7. Pull the lift away from the commode.

8. When complete, recheck the sling for correct attachments.

9. To lift the patient from the commode, refer to Lifting the Patient starting on page 17.
Transferring to a Wheelchair

NOTE: For this procedure, refer to FIGURE 5.2.

NOTE: Before transferring, check that the wheelchair weight capacity can withstand the patient’s weight. Refer to Typical Product Parameters in the wheelchair owner’s manual.

1. Ensure the legs of the lift with the patient in the sling are in the open position.

2. Move the wheelchair into position. Refer to Detail “A”.

3. Engage the rear wheel locks of the wheelchair to prevent movement of the wheelchair. Refer to Detail “B”.

**WARNING**

DO NOT place the patient in the wheelchair if the locks are not engaged. The wheelchair wheel locks MUST be in a locked position before lowering the patient into the wheelchair for transport. Otherwise, injury may result.

4. Position the patient over the wheelchair.

5. Lower the patient into the wheelchair. Refer to Detail “C”.

6. Unhook the sling from all attachment points on the lift. Refer to Detail “D”.

7. Instruct patient to lift their feet off the footplate. Assist the patient if necessary.

8. Remove the sling from around the patient.

9. Pull the lift away from the wheelchair.

FIGURE 5.2 Transferring to a Wheelchair
Transferring to a Bed

NOTE: For this procedure, refer to FIGURE 5.3.

NOTE: The lower center of gravity provides stability making the patient feel more secure and the lift easier to move.

NOTE: The lift arms will stay in position until lowered.

1. Position the patient as far over the bed as possible.

NOTE: If patient is being transferred from a surface that is lower than the bed, raise the patient above the surface of the bed. The patient should be elevated just high enough to clear the bed with their weight fully supported by the lift.

2. Lower the patient onto the bed.

3. Unhook the sling from all attachment points on the lift.

4. Instruct the patient to lift their feet off of the footplate. Assist the patient if necessary.

5. Remove the standing or transport sling from around the patient.

6. Pull the lift away from the bed.

**FIGURE 5.3** Transferring the Patient to a Bed
SECTION 6—USING LIFT AS A STANDING AID

NOTE: For this procedure, refer to FIGURE 6.1 on page 25.

NOTE: The Get-U-Up lift can be used as an aid to lift a person from a seated to a standing position. A minimum of two caregivers is required for this procedure.

NOTE: Invacare recommends that two assistants be used for all lifting preparation and transferring to/from procedures; however, our equipment will permit proper operation by one assistant. The use of one assistant is based on the evaluation of the health care professional for each individual case.

Standing Procedure

1. Ensure that the patient is capable of walking.
2. Fold the footplate toward the mast.
3. Use the adjustment pins to move the kneepad to a comfortable position.
4. Ensure that the patient is in a sitting position to begin the procedure.
   A. If the patient is in bed and requires assistance to come to a sitting position, raise the back of the bed.
   B. Place the lift over the bed with the lift arms angled toward the patient.
   C. Instruct the patient to grasp the lift arms.
   D. As the lift arms are raised, the patient should move legs to the side of the bed until a sitting position on the side of the bed is assumed.
      NOTE: The caregivers should assist as needed.
   E. Pull the lift away as needed to accommodate the patient’s feet and legs over the side of the bed.
5. With one caregiver on each side of the patient, place a gait belt on the patient.
6. Ensure that the patient is wearing shoes with skid-proof soles.
7. If the patient is on the bed, raise the bed (if possible) while ensuring that the patient’s feet remain on the floor.
8. If a walker is to be used, place the walker in front of the patient.
9. Advance the lift toward the patient so that the patient can easily reach the lift arms.
10. Instruct the patient to grasp the lift arms.
11. Ensure that the patient’s feet are directly under them.
12. Begin raising the lift arms.
13. On a count of three, instruct the patient to pull and stand-up while the caregivers support with the gait belt.
**WARNING**

DO NOT lift the patient.

14. Remove the lift to allow the patient to walk.

![Diagram of the lift](image)

**Note:** The upper adjustment pins are typically used for shorter individuals. The lower adjustment pins are typically used for taller individuals.

### SECTION 7— TROUBLESHOOTING

<table>
<thead>
<tr>
<th>SYMPTOMS</th>
<th>FAULTS</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stand up lift feels loose.</td>
<td>Mast/base joint loose. Tie-rods are loose.</td>
<td>Tighten the bolt, washer and locknut that secure the mast to the base. Refer to Assembling the Base, Mast and Horn Assembly on page 10.</td>
</tr>
<tr>
<td>Casters/brakes noisy or stiff.</td>
<td>Fluff or debris in bearings.</td>
<td>Refer to Hydraulic Pump on page 28.</td>
</tr>
<tr>
<td>Noisy or dry sound from pivots.</td>
<td>Needs lubrication.</td>
<td>Refer to Hydraulic Pump on page 28.</td>
</tr>
<tr>
<td>Lift arms will not lower in uppermost position.</td>
<td>Lift arms require a minimum weight load to lower from the uppermost position.</td>
<td>Pull down slightly on the lift arms.</td>
</tr>
</tbody>
</table>

NOTE: If problems are not remedied by the suggested means, please contact your dealer or Invacare.
# SECTION 8— MAINTENANCE

## Maintenance Safety Inspection Checklist

For individual home use, a full inspection is required prior to each new user.

Regular cleaning will reveal loose or worn parts, enhance smooth operation and extend the life expectancy of the lift.

Follow the maintenance procedures described in this manual to keep your stand up lift in continuous service.

</tbody>
</table>
The lift is designed to provide a maximum of safe, efficient and satisfactory service with minimum care and maintenance.

All parts of the stand up lift are made of the best grades of steel, but metal to metal contact will wear after considerable use.

There is no adjustment or maintenance of the casters, other than cleaning, lubrication and checking axle and swivel bolts for tightness. Remove all debris, etc. from the caster and swivel bearings. If any parts are worn, replace these parts immediately.

If you question the safety of any part of the lift, contact your dealer immediately and advise them of the problem.

**Hydraulic Pump**

All parts of the hydraulic pump are precision machined then carefully assembled and tested to ensure reliable service. The pump assembly is completely enclosed and sealed with Neoprene rings to prevent leakage of hydraulic oil. A small amount of oil (about a drop) will accumulate around the piston from time to time and should be removed with a facial tissue.

---

**WARNING**

The hydraulic pump is sealed at the factory and if service is required, the pump unit **MUST** be returned to the factory for repair. **DO NOT** attempt to open the hydraulic pump or obtain local service. This will void the warranty and might result in damage and costly repair. Consult your dealer or contact Invacare for information.

---

**Lubricating the Lift**

*NOTE: For this procedure, refer to FIGURE 8.1.*

The Invacare lift is designed for minimum maintenance. However, a six month check and lubrication should ensure continued safety and reliability.

Keep lift and slings clean and in good working order. Any defect should be noted and reported to your dealer as soon as possible.

The casters **MUST** swivel and roll smoothly. A light grease (waterproof auto lubricant) may be applied to the ball bearing swivel of the casters once a year. Apply more frequently if the casters are exposed to extreme moist conditions.

Lubricate all pivot points. Wipe all excess lubricant from lift surface.
The connection between the mast and the base should be cleaned and coated with petroleum jelly prior to assembly.

**Detecting Wear and Damage**

It is important to inspect all stressed parts, such as slings, sling attachment knobs, and any pivot for slings for signs of cracking, fraying, deformation or deterioration. Replace any defective parts immediately and ensure that the lift is not used until repairs are made. All sling metal parts should be inspected every three months and if wear is apparent, replacement must be made.

Check that all labels are present and legible. Replace if necessary.

**Cleaning the Sling and the Lift**

The sling should be washed regularly in water temperature of 180°F (82°C) and a biological solution. A soft cloth, dampened with water and a small amount of mild detergent, is all that is needed to clean the lift. The lift can be cleaned with non-abrasive cleaners.

**Replacing the Knee Pad**

*NOTE: For this procedure, refer to FIGURE 8.2.*

1. Remove the four button screws and washers that secure existing knee pad to the lift.
2. Remove the existing knee pad from the lift.
3. Position the mounting holes in the new knee pad with the mounting holes in the lift.
4. Using the existing hardware, secure the new knee pad to the lift.

LIMITED WARRANTY

PLEASE NOTE: THE WARRANTY BELOW HAS BEEN DRAFTED TO COMPLY WITH FEDERAL LAW APPLICABLE TO PRODUCTS MANUFACTURED AFTER JULY 4, 1975.

This warranty is extended only to the original purchaser/user of our products.

This warranty gives you specific legal rights and you may also have other legal rights which vary from state to state.

Invacare warrants the products manufactured to be free from defects in materials and workmanship for a period of three years on the lift and one year on the hydraulic pump from the date of purchase. If within such warranty period any such product shall be proven to be defective, such product shall be repaired or replaced, at Invacare's option. This warranty does not include any labor or shipping charges incurred in replacement part installation or repair of any such product. Invacare's sole obligation and your exclusive remedy under this warranty shall be limited to such repair and/or replacement.

For warranty service, please contact the dealer from whom you purchased your Invacare product. In the event you do not receive satisfactory warranty service, please write directly to Invacare at the address on the back cover, provide dealer's name, address, date of purchase, indicate nature of the defect.

Invacare Corporation will issue a serialized return authorization. The defective unit or parts MUST be returned for warranty inspection using the serial number, when applicable as identification within 30 days of return authorization date. Do not return products to our factory without our prior consent. C.O.D. shipments will be refused; please prepay shipping charges.

LIMITATIONS AND EXCLUSIONS: THE FOREGOING WARRANTY SHALL NOT APPLY TO SERIAL NUMBERED PRODUCTS IF THE SERIAL NUMBER HAS BEEN REMOVED OR DEFACED, PRODUCTS SUBJECT TO NEGLIGENCE, ACCIDENT, IMPROPER OPERATION, MAINTENANCE OR STORAGE, PRODUCTS MODIFIED WITHOUT INVACARE'S EXPRESS WRITTEN CONSENT (INCLUDING, BUT NOT LIMITED TO, MODIFICATION THROUGH THE USE OF UNAUTHORIZED PARTS OR ATTACHMENTS; PRODUCTS DAMAGED BY REASON OF REPAIRS MADE TO ANY COMPONENT WITHOUT THE SPECIFIC CONSENT OF INVACARE, OR TO A PRODUCT DAMAGED BY CIRCUMSTANCES BEYOND INVACARE'S CONTROL, AND SUCH EVALUATION WILL BE SOLELY DETERMINED BY INVACARE. THE WARRANTY SHALL NOT APPLY TO PROBLEMS ARISING FROM NORMAL WEAR OR FAILURE TO ADHERE TO THE INSTRUCTIONS IN THIS MANUAL.

THE FOREGOING WARRANTY IS EXCLUSIVE AND IN LIEU OF ANY OTHER EXPRESS WARRANTIES. IMPLIED WARRANTIES, IF ANY, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, SHALL NOT EXTEND BEYOND THE DURATION OF THE EXPRESSED WARRANTY PROVIDED HEREIN AND THE REMEDY FOR VIOLATIONS OF ANY IMPLIED WARRANTY SHALL BE LIMITED TO REPAIR OR REPLACEMENT OF THE DEFECTIVE PRODUCT PURSUANT TO THE TERMS CONTAINED HEREIN. INVACARE SHALL NOT BE LIABLE FOR ANY CONSEQUENTIAL OR INCIDENTAL DAMAGES WHATSOEVER.

SOME STATES DO NOT ALLOW EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGE, OR LIMITATION ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE EXCLUSIONS AND LIMITATIONS MAY NOT APPLY TO YOU.

THIS WARRANTY SHALL BE EXTENDED TO COMPLY WITH STATE OR PROVINCIAL LAWS AND REQUIREMENTS.
